
Here's your exploration. Add the digits of the totals. (For $1 \times 3 = 3$ you would write 3. For $2 \times 3 = 6$, you would write 6. For $3 \times 3 = 9$, you would write 9. For $4 \times 3 = 12$, you would write $1 + 2 = 3$. For $5 \times 3 = 15$, you would write $1 + 5 = 6$. You get the idea. Keep on going. See if you detect a pattern. Describe the pattern.
