## Three Leaf Clover Exploration

Clovers have compound leaves. That means little leaves are on the stem. Go outside and collect 55 three leaf clovers. Glue the clovers in rows on a large sheet. Put one in the first row, two in the second row, three in the third row. Keep going until you have made ten rows. Look at the example. It stops at five.

Next you are to count the number of leaves in each row and record the totals.

Then use the number chart to color the totals.
